QE 5.0 to boost productivity under 13MP

QE 5.0 to boost productivity under 13MP

KUALA LUMPUR: The Malaysia Productivity Corporation (MPC) yesterday introduced Quality Environment 5.0 (QE 5.0), an industry-designed, MPC-endorsed programme aimed at helping firms achieve measurable productivity gains in line with the 13th Malaysia Plan (13MP) target of 3.6% annual labour productivity growth.

This programme was designed by MPC in collaboration with KT Ng's consulting team.

Currently this programme certifies

200 companies under QE 5.0, with early adopters already reporting stronger efficiency, employee engagement, and performance outcomes.

"QE 5.0 embeds a culture of continuous improvement to help firms achieve real cost savings and productivity gains," said Professional Services Productivity Nexus champion Choo Kok Beng.

"I see QE 5.0 as more than a programme. It is a movement to transform how Malaysian companies work, think, and grow," said Ng.

MPC director-general Datuk Zahid Ismail stressed that industry-led programmes like QE 5.0 are vital to meeting national productivity targets and positioning Malaysia among the top 12 most competitive nations by 2030.

Key features of QE 5.0 are structured frameworks for workplace optimisation; customised consulting support; measurable productivity outcomes via leading and lagging indicators; and capacity-building for sustained improvement.

MPC honours partners with recognition certificates, marking a new milestone in boosting productivity and excellence.
